Procorp Enterprises LLC adds Senior Engineer

MILWAUKEE, WI – Rob Brillhart has joined the Procorp engineering team as a Senior Engineer. Rob brings extensive knowledge and capability to the team including field work, wastewater treatment plant system design and implementation in a number of industries and for municipalities, and construction management. In addition to implementing biological, chemical, and physical wastewater treatment systems, Rob has been involved in the installation of a large treatment system for an ethanol manufacturer, and the development of permitting and compliance activities including air, wastewater monitoring, and the development of SPCC plans. He has also managed full scale operations, trained plant operators, and provided on-site troubleshooting. Rob has experience in meeting the needs of a variety of customers and will be a valuable resource to our current and future clients.

About Procorp Enterprises LLC

Established in 1987, Procorp provides customized and innovative sustainable water and wastewater treatment solutions to municipal clients as well as the dairy, food, beverage, meat and other industries. Procorp's pretreatment or complete treatment systems make water treatment processes more efficient and environmentally friendly than conventional processes. Licensed and patented technologies help Procorp's customers to near or achieve zero liquid discharge, soften water without adding chlorides, improve the system performance and removal phosphorus or other nutrients from water. Procorp also specializes in consulting, engineering, and design/build; they can deliver turn-key installations in a variety of ways, allowing clients to find the most effective solution for their business.
